## Global access to infertility care: The Walking Egg project

November 24-25, 2014, Tygerberg Hospital, Stellenbosch, South Africa

**Editors:**  
W. Ombelet, J. Goossens

The Walking Egg is a non-profit organization (npo) founded in 2010 to realize the Arusha Project which strives to implement accessible infertility programs in resource-poor countries. The project aims to raise awareness surrounding the childlessness and to make infertility care in all its aspects, including assisted reproductive technologies, available and accessible for a much larger part of the world population.

All scientists involved have agreed to donate the royalties of all inventions made in the frame of this project to the npo, also the founding member and well known artist Koen Vanmechelen contributes actively to the fundraising of this global project. He has made a beautiful litho, now covering this monograph, which will be sold at an affordable price – the calculated price of one low-cost IVF cycle in developing countries – to everyone who wants to support reproductive health care in resource poor countries.

The most beautiful thing we can experience is the mysterious.  
It is the source of all true art and all science. (Albert Einstein)
